We shall develop the four standard tests used to check that two triangles are congruent. Such figures are called congruent.Knowing that two figures are congruent is important. The four similarity tests are developed as generalisations of the four congruence tests. Fabio Skilnik :: GMATH method creator (Math for the GMAT)

You have already seen the SSS (side-side-side) congruence test for triangles: if the three sides of one triangle have the same lengths as the three sides of another triangle, then the two triangles are congruent. That is, they have exactly the same size and shape. Describe and name a new congruence test based on your work in Problem H5.

Two triangles are congruent if their corresponding sides are equal in length, and their corresponding angles are equal in measure.. If triangle ABC is congruent to triangle DEF, the relationship can be written mathematically as: $\triangle ABC \cong \triangle DEF$. In many cases it is sufficient to establish the equality of three corresponding parts and use one of the following results to deduce the congruence of the two ...

2. Using the meaning of congruent (the exact same three angles and sides), determine if these two triangles fit this meaning: They do, because both are 3-4-5 right triangles, and thus must have corresponding and equal angles due to trigonometric properties.

How to find if right triangles are congruent - ACT Math

Problem : When the lengths of the sides of two triangles are the same, those triangles are congruent. Using symbols and the correct correspondence, write that the two triangles below are congruent. There are six ways to properly label the triangles: (1) Triangle CLG is congruent to triangle FDR, (2) LGC is congruent to DRF, (3) GCL and RFD, (4) CGL and FRD, (5) GLC and RDF, and (6) LCG and DFR.
