The Dynamic Strength Index, often referred to as the dynamic strength deficit, measures the difference between an athlete's maximal and explosive strength capacity. However, the term "index" is preferred over "deficit", as it's an index of the athlete's current performance ability.

**Dynamic Strength Index - Science for Sport**  
First published under the title "Dynamic Tension", this is a program of "dynamic" (or moving) self-resistance exercises, designed to develop strength evenly and naturally, free of weights or other equipment (except two chairs and a short stick). This is a pretty complete program, focusing on all major body parts.

1. Dynamic strength. dynamic strength can be called isotonic strength because it is related to movements. In pull-ups and push-ups, we required dynamic strength. In performing such workout there is a diminishing tendency in dynamic strength and as a result, after some time, muscles refuse to do work. At this juncture, man is not able to do even one extra pull-ups for push-ups. Moments are clearly visible when someone uses dynamic strength.
