## Section Review 18-2

1. Species are classified into the same genus because they are closely related; that is, they share a more recent common ancestry. 2. Instead of grouping organisms only according to physical similarities, evolutionary classification also considers evolution-ary history. 3. Cladistic analysis considers only evo-

### Ch. 18 Answer Key

Modern Evolutionary Classification ● In a sense, organisms determine who belongs to their species by choosing with whom they will mate. ● Taxonomic groups above the level of species are “invented” by researchers who decide how to distinguish between one genus, species, family, or phylum and another.

### Modern Evolutionary Classification - Weebly

Section 18-3 Kingdoms and Domains(pages 457-461) This section describes the six kingdoms of life as they are now identified. It also describes the three-domain system of classification.
