covered within its pages, and discusses the value that the book provides to business readers.

The Art of Enterprise Information Architecture: Best ...

They show us how enterprise information fits into the broader context of enterprise architecture frameworks such as The Open Group Architecture Framework (TOGAF). They introduce a multi-layered information architecture reference model that has the allure of a standard, common foundation for the entire profession. They also show us how Enterprise Information Architecture (EIA) alludes to emerging, contemporary topics such as SOA, business intelligence, cloud-based delivery and master data ...

The Art of Enterprise Information Architecture - Cappgemini ...

Enterprise information architecture (EIA) is considered a component of the enterprise architecture. The enterprise information architecture is intended to provide a common framework for the cost-effective sharing of data across the different organizational units taking care of the security and privacy of the specific information.

What is Enterprise Information Architecture (EIA ...

Abstract. This state-of-the-art paper is intended to set the scene for a special issue of the Computers in Industry Journal on “Future Perspectives on Next Generation Enterprise Information Systems”. It gives a brief history of Enterprise Information Systems (EISs) and discusses various aspects of EISs, including EIS design and engineering, the impact of enterprise modelling, enterprise architecture, enterprise integration and interoperability and enterprise networking on EISs before ...

Enterprise information systems state of the art: Past ...

Enterprise information architecture (EIA) is the part of the enterprise architecture process that describes — through a set of requirements, principles and models — the current state, future state and guidance necessary to flexibly share and exchange information assets to achieve effective enterprise change.

Definition of Enterprise Information Architecture (EIA ...

Enterprise Information Systems (EISs) can be defined as “software systems for business management, encompassing modules supporting organisational functional areas such as planning, manufacturing, sales, marketing, distribution, accounting, financial, human resources management, project management, inventory management, service and maintenance, transportation and e-business” . They are made of computers, software, people, processes and data.

Enterprise information systems state of the art: Past ...

Enterprise integration is a technical field of enterprise architecture, which is focused on the study of topics such as system interconnection, electronic data interchange, product data exchange and distributed computing environments. It is a concept in enterprise engineering to provide the relevant information and thereby enable communication between people, machines and computers and their efficient co-operation and co-ordination.
