The Model XT-4 transmitter can come from an external regulated 12 VDC power supply (Linear Model T-1224DC) or from a 12-volt battery. A 3-amp fuse protects the unit from reverse power polarity. The XT-4 draws about 15 µA standby, and about two amps during transmissions. If the power supply voltage drops below 10.5 volts, a low battery message

I own an AM radio station in NY State on 850 KHz that still has an XT-1-A transmitter in its transmitter building, though I don't believe it is currently in working condition. I am interested in a complete manual on the transmitter, if it is available. I would like to see if I can revive the transmitter.

The Harvey Wells T-90 transmitter requires an external AC power supply (type APS-90) or equivalent. I used my Transmitter Power Supply V3 to supply the required voltages. These include 6.3VAC at 8A for the filaments, 300VDC for the tube high voltage supply and 650VDC for the final amplifier high voltage supply.
